

## Steel

Steel Fittings offer a higher tensile strength and higher yield strength than Zinc Die-Cast Fittings. Machined from a solid bar of stock steel, Steel Fittings are coated with zinc plating for corrosion protection. Steel Fittings are suitable for dry and/or wet locations, and are considered to be “specification grade” fittings.

## Zinc Die Cast

Zinc Die-Cast Fittings are quickly machined in one piece, making them very economical in price and light-weight when transported. Zinc Die-Cast Fittings are often deployed in short conduit runs and non-critical electrical work.

## Non-Metallic

Non-Metallic PVC and Nylon Fittings are used in wet and/or dry locations when conduits and fittings are not subject to physical damage. Commonly used in residential applications, Non-Metallic Fittings are ideal when extra flexibility is desired for installation or maintenance.
