

May 2, 2022
the stair shall be designed with $\Omega_{0}$ corresponding to the seismic force-resisting system but not less than $2-1 / 2$.

### 13.6 MECHANICAL AND ELECTRICAL COMPONENTS

13.6.1 General. Mechanical and electrical components and their supports shall satisfy the requirements of this section. The attachment of mechanical and electrical components and their supports to the structure shall meet the requirements of Section 13.4. Appropriate coefficients shall be selected from Table 13.6-1.

EXCEPTION: Light fixtures, lighted signs, and ceiling fans not connected to ducts or piping, which are supported by chains or otherwise suspended from the structure, are not required to satisfy the seismic force and relative displacement requirements provided that they meet all of the following criteria:

1. The design load for such items shall be equal to 1.4 times the operating weight acting down with a simultaneous horizontal load equal to 1.4 times the operating weight. The horizontal load shall be applied in the direction that results in the most critical loading for the design.
2. Seismic interaction effects shall be considered in accordance with Section 13.2.3.

Table 13.6-1 Seismic Coefficients for Mechanical and Electrical Components

| Components | $a_{p}{ }^{\text {a }}$ | $R_{p}{ }^{\text {b }}$ | $\Omega_{0}{ }^{\text {c }}$ |
| :---: | :---: | :---: | :---: |
| MECHANICAL AND ELECTRICAL COMPONENTS |  |  |  |
| Air-side HVACR, fans, air handlers, air conditioning units, cabinet heaters, air distribution boxes, and other mechanical components constructed of sheet metal framing | $21 / 2$ | 6 | 2 |
| Wet-side HVACR, boilers, furnaces, atmospheric tanks and bins, chillers, water heaters, heat exchangers, evaporators, air separators, manufacturing or process equipment, and other mechanical components constructed of high-deformability materials | 1 | $2^{1 / 2}$ | 2 |
| Air coolers (fin fans), air-cooled heat exchangers, condensing units, dry coolers, remote radiators and other mechanical components elevated on integral structural steel or sheet metal supports | $2^{1 / 2}$ | 3 | $11 / 2$ |
| Engines, turbines, pumps, compressors, and pressure vessels not supported on skirts and not within the scope of Chapter 15 | 1 | $2^{1 / 2}$ | 2 |
| Skirt-supported pressure vessels not within the scope of Chapter 15 | $21 / 2$ | 21/2 | 2 |
| Elevator and escalator components | 1 | $2^{1 / 2}$ | 2 |
| Generators, batteries, inverters, motors, transformers, and other electrical components constructed of high-deformability materials | 1 | $21 / 2$ | 2 |
| Motor control centers, panel boards, switch gear, instrumentation cabinets, and other components constructed of sheet metal framing | $2^{1 / 2}$ | 6 | 2 |
| Communication equipment, computers, instrumentation, and controls | 1 | $2^{1 / 2}$ | 2 |
| Roof-mounted stacks, cooling and electrical towers laterally braced below their center of mass | $21 / 2$ | 3 | 2 |
| Roof-mounted stacks, cooling and electrical towers laterally braced above their center of mass | 1 | $21 / 2$ | 2 |
| Lighting fixtures | 1 | $11 / 2$ | 2 |
| Other mechanical or electrical components | 1 | $11 / 2$ | 2 |
| VIBRATION-ISOLATED COMPONENTS AND SYSTEMS ${ }^{b}$ |  |  |  |
| Components and systems isolated using neoprene elements and neoprene isolated floors with built-in or separate elastomeric snubbing devices or resilient perimeter stops | $2^{1 / 2}$ | $2^{1 / 2}$ | 2 |
| Spring-isolated components and systems and vibration-isolated floors closely restrained using built-in or separate elastomeric snubbing devices or resilient perimeter stops | $21 / 2$ | 2 | 2 |
| Internally isolated components and systems | $2^{1 / 2}$ | 2 | 2 |
| Suspended vibration-isolated equipment including in-line duct devices and suspended internally isolated components DISTRIBUTION SYSTEMS | $21 / 2$ | $21 / 2$ | 2 |
| Piping in accordance with ASME B31 (2001, 2002, 2008, and 2010), including in-line components with joints made by welding or brazing | $2^{1 / 2}$ | 12 | 2 |
| Piping in accordance with ASME B31, including in-line components, constructed of high- or limited-deformability materials, with joints made by threading, bonding, compression couplings, or grooved couplings | $2^{1 / 2}$ | 6 | 2 |
| Piping and tubing not in accordance with ASME B31, including in-line components, constructed of high-deformability materials, with joints made by welding or brazing | $2^{1 / 2}$ | 9 | 2 |
| Piping and tubing not in accordance with ASME B31, including in-line components, constructed of high- or limited-deformability materials, with joints made by threading, bonding, compression couplings, or grooved couplings | $2^{1 / 2}$ | $41 / 2$ | 2 |
| Piping and tubing constructed of low-deformability materials, such as cast iron, glass, and nonductile plastics | $2^{1 / 2}$ | 3 | 2 |
| Ductwork, including in-line components, constructed of high-deformability materials, with joints made by welding or brazing | $2^{1 / 2}$ | 9 | 2 |
| Ductwork, including in-line components, constructed of high- or limited-deformability materials with joints made by means other than welding or brazing | $21 / 2$ | 6 | 2 |
| Ductwork, including in-line components, constructed of low-deformability materials, such as cast iron, glass, and nonductile plastics | $21 / 2$ | 3 | 2 |
| Electrical conduit and cable trays | 21/2 | 6 | 2 |
| Bus ducts | 1 | 21/2 | 2 |
| Plumbing | 1 | $2^{1 / 2}$ | 2 |
| Pneumatic tube transport systems | $21 / 2$ | 6 | 2 |

${ }^{a}$ A lower value for $a_{p}$ is permitted where justified by detailed dynamic analyses. The value for $a_{p}$ shall not be less than 1 . The value of $a_{p}$ equal to 1 is for rigid components and rigidly attached components. The value of $a_{p}$ equal to $2 \frac{1}{2}$ is for flexible components and flexibly attached components.
${ }^{b}$ Components mounted on vibration isolators shall have a bumper restraint or snubber in each horizontal direction. The design force shall be taken as $2 F_{p}$ if the nominal clearance (air gap) between the equipment support frame and restraint is greater than 0.25 in . ( 6 mm ). If the nominal clearance specified on the construction documents is not greater than 0.25 in . $\left(6 \mathrm{~mm}\right.$ ), the design force is permitted to be taken as $F_{p}$.
${ }^{\mathrm{c}}$ Overstrength as required for anchorage to concrete and masonry. See Section 12.4.3 for seismic load effects including overstrength.

## Assumptions:

- Max weight = 80 lbs
- Post is HSS $3 \times 3 \times 13 \mathrm{ga}$

Fy = 36 ksi

- Base plate is PL3GAx10"x0'-10"
$\mathrm{F}_{\mathrm{y}}=50 \mathrm{ksi}$
- $\mathrm{S}_{\mathrm{DS}}<1.8$
- $\mathrm{F}_{\mathrm{c}, \text { min }}=2500 \mathrm{psi}$

## Per ASCE 7-16 Chapter 13:

13.3.1.1 Horizontal Force. The horizontal seismic design force $\left(F_{p}\right)$ shall be applied at the component's center of gravity and distributed relative to the component's mass distribution and shall be determined in accordance with Eq. (13.3-1):

$$
\begin{equation*}
F_{p}=\frac{0.4 a_{p} S_{D S} W_{p}}{\left(\frac{R_{p}}{I_{p}}\right)}\left(1+2 \frac{z}{h}\right) \tag{13.3-1}
\end{equation*}
$$

$F_{p}$ is not required to be taken as greater than

$$
\begin{equation*}
F_{p}=1.6 S_{D S} I_{p} W_{p} \tag{13.3-2}
\end{equation*}
$$

and $F_{p}$ shall not be taken as less than

$$
\begin{equation*}
F_{p}=0.3 S_{D S} I_{p} W_{p} \tag{13.3-3}
\end{equation*}
$$

Assume "other components constructed of sheet metal framing "
$\mathrm{a}_{\mathrm{p}}=2, \mathrm{R}_{\mathrm{P}}=6, \Omega_{0}=2$
$Z / H=1, I_{P}=1.5, S_{D S}=1.8$

$$
\mathrm{F}_{\mathrm{p}}=(0.4)(1.8)(2.5)(80 \mathrm{lbs})(1+2(1)) /(6 / 1.5)=87 \mathrm{lbs}-\text { governs }
$$

$F_{p, \text { max }}=(1.6)(1.8)(1.5)(80 \mathrm{lbs})=346 \mathrm{lbs}$
$\mathrm{F}_{\mathrm{p}, \text { min }}=(0.3)(1.8)(1.5)(80 \mathrm{lbs})=65 \mathrm{lbs}$

## PP-60

Assumptions:

- Max weight = 80 lbs
- Post is HSS3x3x13ga

Fy = 36 ksi

## 6 Warnings

- The anchor design methods in PROFIS Engineering require rigid anchor plates per current regulations (AS 5216:2021, ETAG 001/Annex C, EOTA TR029 etc.). This means load re-distribution on the anchors due to elastic deformations of the anchor plate are not considered - the anchor plate is assumed to be sufficiently stiff, in order not to be deformed when subjected to the design loading. PROFIS Engineering calculates the minimum required anchor plate thickness with CBFEM to limit the stress of the anchor plate based on the assumptions explained above. The proof if the rigid anchor plate assumption is valid is not carried out by PROFIS Engineering. Input data and results must be checked for agreement with the existing conditions and for plausibility!
- Condition A applies where the potential concrete failure surfaces are crossed by supplementary reinforcement proportioned to tie the potential concrete failure prism into the structural member. Condition B applies where such supplementary reinforcement is not provided, or where pullout or pryout strength governs.
- Refer to the manufacturer's product literature for cleaning and installation instructions.
- For additional information about ACI 318 strength design provisions, please go to https://submittals.us.hilti.com/PROFISAnchorDesignGuide/
- An anchor design approach for structures assigned to Seismic Design Category C, D, E or F is given in ACl 318-14, Chapter 17, Section 17.2.3.4.3 (a) that requires the governing design strength of an anchor or group of anchors be limited by ductile steel failure. If this is NOT the case, the connection design (tension) shall satisfy the provisions of Section 17.2.3.4.3 (b), Section 17.2.3.4.3 (c), or Section 17.2.3.4.3 (d). The connection design (shear) shall satisfy the provisions of Section 17.2.3.5.3 (a), Section 17.2.3.5.3 (b), or Section 17.2.3.5.3 (c).
- Section 17.2.3.4.3 (b) / Section 17.2.3.5.3 (a) require the attachment the anchors are connecting to the structure be designed to undergo ductile yielding at a load level corresponding to anchor forces no greater than the controlling design strength. Section 17.2.3.4.3 (c) / Section 17.2.3.5.3 (b) waive the ductility requirements and require the anchors to be designed for the maximum tension / shear that can be transmitted to the anchors by a non-yielding attachment. Section 17.2.3.4.3 (d) / Section 17.2.3.5.3 (c) waive the ductility requirements and require the design strength of the anchors to equal or exceed the maximum tension / shear obtained from design load combinations that include E , with E increased by $\omega_{0}$.
- Hilti post-installed anchors shall be installed in accordance with the Hilti Manufacturer's Printed Installation Instructions (MPII). Reference ACI 318-14, Section 17.8.1.

## 7 Installation data

Profile: Square HSS (AISC), HSS4X4X.25; (L x W x T) = 4.000 in. x 4.000 in. $x$ 0.250 in.

Hole diameter in the fixture: $d_{f}=0.438$ in.
Plate thickness (input): 0.236 in.
Recommended plate thickness: not calculated
Drilling method: Hammer drilled
Cleaning: Manual cleaning of the drilled hole according to instructions for use is required.

Anchor type and diameter: Kwik Bolt TZ2 - CS 3/8 (2) hnom2

Item number: 2210237 KB-TZ2 3/8x3 1/2

Maximum installation torque: 361 in.lb
Hole diameter in the base material: 0.375 in.
Hole depth in the base material: 2.750 in.
Minimum thickness of the base material: 4.000 in.

Hilti KB-TZ2 stud anchor with 2.5 in embedment, 3/8 (2) hnom2, Carbon steel, installation per ESR-4266

### 7.1 Recommended accessories

Drilling
Cleaning
Setting

- Suitable Rotary Hammer
- Properly sized drill bit
- Manual blow-out pump
- Torque controlled cordless impact tool
- Torque wrench
- Hammer

## 8 Remarks; Your Cooperation Duties

- Any and all information and data contained in the Software concern solely the use of Hilti products and are based on the principles, formulas and security regulations in accordance with Hilti's technical directions and operating, mounting and assembly instructions, etc., that must be strictly complied with by the user. All figures contained therein are average figures, and therefore use-specific tests are to be conducted prior to using the relevant Hilti product. The results of the calculations carried out by means of the Software are based essentially on the data you put in. Therefore, you bear the sole responsibility for the absence of errors, the completeness and the relevance of the data to be put in by you. Moreover, you bear sole responsibility for having the results of the calculation checked and cleared by an expert, particularly with regard to compliance with applicable norms and permits, prior to using them for your specific facility. The Software serves only as an aid to interpret norms and permits without any guarantee as to the absence of errors, the correctness and the relevance of the results or suitability for a specific application.
- You must take all necessary and reasonable steps to prevent or limit damage caused by the Software. In particular, you must arrange for the regular backup of programs and data and, if applicable, carry out the updates of the Software offered by Hilti on a regular basis. If you do not use the AutoUpdate function of the Software, you must ensure that you are using the current and thus up-to-date version of the Software in each case by carrying out manual updates via the Hilti Website. Hilti will not be liable for consequences, such as the recovery of lost or damaged data or programs, arising from a culpable breach of duty by you.

## Assumptions:

- Max weight = 80 lbs
- Post is HSS3x3x13ga

Fy = 36 ksi

- Base plate is PL3GAx10"x0'-10"
$\mathrm{F}_{\mathrm{y}}=50 \mathrm{ksi}$
- $\mathrm{S}_{\mathrm{DS}}<1.8$
- $\mathrm{F}_{\mathrm{c}, \text { min }}=2500 \mathrm{psi}$

## Per ASCE 7-16 Chapter 13:

13.3.1.1 Horizontal Force. The horizontal seismic design force $\left(F_{p}\right)$ shall be applied at the component's center of gravity and distributed relative to the component's mass distribution and shall be determined in accordance with Eq. (13.3-1):

$$
\begin{equation*}
F_{p}=\frac{0.4 a_{p} S_{D S} W_{p}}{\left(\frac{R_{p}}{I_{p}}\right)}\left(1+2 \frac{z}{h}\right) \tag{13.3-1}
\end{equation*}
$$

$F_{p}$ is not required to be taken as greater than

$$
\begin{equation*}
F_{p}=1.6 S_{D S} I_{p} W_{p} \tag{13.3-2}
\end{equation*}
$$

and $F_{p}$ shall not be taken as less than

$$
\begin{equation*}
F_{p}=0.3 S_{D S} I_{p} W_{p} \tag{13.3-3}
\end{equation*}
$$

Assume "other components constructed of sheet metal framing "
$\mathrm{a}_{\mathrm{P}}=2, \mathrm{R}_{\mathrm{P}}=6, \Omega_{0}=2$
$Z / H=1, I_{P}=1.5, S_{D S}=1.8$
$\mathrm{F}_{\mathrm{P}}=(0.4)(1.8)(2.5)(80 \mathrm{lbs})(1+2(1)) /(6 / 1.5)=87 \mathrm{lbs}-$ governs
$F_{P, \text { max }}=(1.6)(1.8)(1.5)(80 \mathrm{lbs})=346 \mathrm{lbs}$
$F_{p,} \min =(0.3)(1.8)(1.5)(80 \mathrm{lbs})=65 \mathrm{lbs}$

## PP-30

Assumptions:

- Max weight = 80 lbs
- Post is HSS3x3x13ga
$\mathrm{Fy}=36 \mathrm{ksi}$
- Base plate is PL3GAx10"x0'-10" $\mathrm{F}_{\mathrm{y}}=50 \mathrm{ksi}$
- $\mathrm{S}_{\mathrm{DS}}<1.8$
$-\mathrm{F}_{\mathrm{c}, \text { min }}=2500 \mathrm{psi}$
$M_{u}=(87 \mathrm{lbs})(30 \mathrm{\prime} \mathrm{\prime})=2610 \mathrm{lbin}$
Check Bending of HSS3x3x13ga Post
$\varnothing \mathrm{M}_{\mathrm{N}}=(0.9)(36 \mathrm{ksi})\left(0.96 \mathrm{in}^{3}\right)=31104 \mathrm{lbin}>2610 \mathrm{lbin}-\mathrm{ok}!$
Check 1/4" SMS Screw
